

Jointing Grit

Our Jointing Grit is used for filling joints on block paving, creating a close and tight bond, adding stabilisation of the block paving.

Working to DEFRA specifications, the Jointing Grit ensures that the water can drain away freely through the laying course and sub-base, preventing the build-up of surface water. The Jointing Grit is a double washed granite, supplied in 25kg bags and bulk bags.

Particle Size	% retained	% passing
10.00mm	0.0	100
6.50mm	0.5	99.5
4.00mm	7.1	92.4
2.00mm	75.4	17.0
1.00mm	12.5	4.5
63µm	4.0	0.5
-63µm	0.5	—
